

## **Q1 2020 GitHub Developer Activity Series - Part 1**

AT LEAST ONE OF THE ANALYSTS PARTICIPATING IN THE PREPARATION OF THIS REPORT OWNS ONE OR MORE DIGITAL ASSETS MENTIONED IN THIS REPORT. YOU ARE RESPONSIBLE FOR DETERMINING WHETHER ANYTHING CONTAINED HEREIN IS SUITABLE FOR YOUR PARTICULAR CIRCUMSTANCES, AND FOR SEEKING PROFESSIONAL TAX, LEGAL, AND/OR INVESTMENT ADVICE AS APPROPRIATE. PLEASE SEE THE OTHER DISCLOSURES AT THE END OF THIS REPORT.

### **Overview**

This report is a collation of key GitHub metrics across 178 of the top public digital assets by market cap, recent transaction volume, and institutional interest. A few assets that would be included, such as Tezos, use alternative repositories and so are out of scope for this version of the report.

Adoption and viability of public digital assets benefit from an ecosystem of demand, use, and support. Developer activity and engagement is one facet of this ecosystem, which can be measured by the underlying open source code repositories. The number of bugs fixed, the number of code changes proposed, the number of developers who return to contribute, and other measures all help better understand the depth of community involvement.

For this report, a set of metrics are employed to measure the absolute activity during Q1 2020, and in certain cases the change in activity from Q4 2019 to Q1 2020. Some of the measures are useful in comparing engagement of a token versus peers. A glossary of definitions is contained in Figure 1.

A follow-up report will cover a comparison of developer activity across digital asset sectors for insights into larger trends. As well, a more detailed analysis of individual token activity is available for purchase.

**Figure 1 - Developer Activity Overview Glossary**

<b>Metric</b>	<b>Description</b>
Open Issues	The total number of Open Issues in the defined period.
Closed Issues	The total number of Closed Issues in the defined period.
Open-to-Close Ratio (OCIR)	A direct measure of developer effectiveness. It is calculated by dividing the total number of Closed Issues (issues with the codebase that have been fixed by the development team) by the total number of Open Issues (issues with the codebase that have not been fixed by the development team).
Minimum Proposed Pull Request Requirement (PPR)	A measure of developer activity. It is calculated by adding all Pull Requests (requests to change the codebase) proposed by internal or external developers, or by the users of the codebase.
Minimum Merged Pull Request Requirement (MPR)	A measure of developer activity. It is calculated by adding all Pull Requests (requests to change the codebase) implemented by internal or external developers.
Commits	A commit is an approved change to a project's source code that the project's community and administrators agree is an improvement. This metric can be used as a benchmark since a forked project inherits all the code commits of its predecessors.
Number of Releases	A measure of a project's software updates over a period.
Average Size of Release	A measure of a project's development team's ability to release efficient and clean software updates. Each release is compared to its predecessor to gather an average size across all releases. This metric is measured in megabytes.
Average Time-to-Close Pull Request (T2C)	A measure of a project's ability to efficiently close pull requests in a timely manner. In the case of this report, the period is one business quarter or approximately 90 days.
Developers (Total)	The total amount of developers that have contributed to a project in the time. In the case of this report, the period is one-business quarter or approximately 90 days.
Developers (Repeat)	A repeat developer has contributed code for a minimum 10 days in a month period.
Developers (Casual)	A casual developer has contributed code for a minimum two days and maximum nine days in a month period.
Developers (One Time)	A one-time developer has contributed code one day in a month period.
Number of Forks	<p>A fork is a copy of a repository that a developer manages. Forks let you make changes to a project without affecting the original repository. You can fetch updates from or submit changes to the original repository with pull requests. In open source projects, forks are often used to iterate on ideas or changes before they are offered back to the upstream repository.</p> <p>A project can only be forked once per developer account; therefore, it is difficult for nefarious actors to manipulate the metric.</p>
