

Real-World Assets (RWAs) Tokenization Report - January 2024 Recap

YOU ARE RESPONSIBLE FOR DETERMINING WHETHER ANYTHING CONTAINED HEREIN IS SUITABLE FOR YOUR PARTICULAR CIRCUMSTANCES, AND FOR SEEKING PROFESSIONAL TAX, LEGAL, AND/OR INVESTMENT ADVICE AS APPROPRIATE. PLEASE SEE THE OTHER DISCLAIMERS AT THE END OF THIS REPORT.

This report highlights developments related to the tokenization and on-chain adoption of Real-World Assets (RWAs).

Our report includes details on centralized industry players and asset class coverage, as well as coverage of select decentralized finance protocols working to integrate RWAs on-chain.

Information is compiled from Digital Asset Research's (DAR's) data sources, public sources, media reports, and press releases, and, while wide-ranging, this report covers only representative initiatives related to the development and tokenization of RWAs in the digital asset space.

Introduction

While many cryptocurrencies offer solutions to the challenges encountered by Web3 users, only a few digital assets possess characteristics that connect them to real-world economic activities. Skeptics contend that cryptocurrency use cases are confined to the digital realm, and therefore the value of crypto assets is not sustainable, given that much of daily life revolves around the physical world.

Real-world asset tokenization bridges this gap between the physical and digital worlds. Real-World Assets (RWAs) are assets that exist tangibly offline, such as real estate or equities. Tokenization refers to the process of generating a digital certificate that is impervious to alteration or replication to represent an RWA on a blockchain. These digital certificates are backed by real-world assets as collateral.

Through tokenization, investors can gain access to conventional investment opportunities in a more trustless and efficient manner via blockchain technology. Settlement can be conducted in real time and investors are always able to see where their assets are stored on chain. The spectrum of assets that could be tokenized includes but is not confined to, real estate, private credit, securities, commodities, and fiat currencies. A significant proportion of the world's financial value is ascribed to RWAs, thereby presenting the potential for RWA tokens to access a total addressable market equivalent to the largest financial markets.

In this report, entities working on RWA initiatives are detailed in three groups:

- Centralized organizations that offer tokenization services are detailed in the **CeFi RWA** sections.
- Decentralized Finance (DeFi) protocols that integrate RWAs with on-chain market participants are detailed in the **DeFi RWA** section.
- On-chain U.S. Treasury products, which include products from both CeFi and DeFi platforms, are detailed in the **RWA U.S. Treasury Protocols** section.

Key Takeaways

- 38 of the listed organizations are registered in the United States, followed by Singapore with 6 protocols, Switzerland and the United Kingdom with 4 protocols each, and India and Luxembourg with 3 protocols each.
- 2 new projects were added to this month's report:
 - Groma is a real-estate tokenization platform based in the United States.
 - Zodor is a Web3 platform based in India that allows users to co-own assets for as little as \$10.
- Only 14 organizations utilize an in-house blockchain network.
- 55 of the organizations have their own tokenized asset marketplace.
- 58 of the organizations support the fractionalization of real-world assets.

Data as of 29 January 2024

Key Takeaways

- As of January 2024, the most common tokenized asset types were real estate (37) and equities (32).
- Tokenization of fixed income and private credit are almost as popular, with 28 and 27 platforms, respectively, providing these services.
- Tokenization of foreign exchange and commodities-based assets remains the least popular among CeFi RWA providers.

DeFi RWA Industry Players

The following table provides details on a selection of 52 on-chain tokenization providers. Unlike their CeFi counterparts, DeFi RWA providers are generally more permissionless, with a majority of operations conducted on the blockchain.

Data as of 29 January 2024

Key Takeaways

- 4 new protocols were added to our list of decentralized providers:
 - Defactor tokenizes private credit and fixed income on the Ethereum and Polygon blockchains.
 - Parabol Finance is a stablecoin protocol with a native yield mechanism.
 - Unikura enables its users to acquire ownership rights to a collectible via its physically-backed NFT.
 - Untangled is focusing on tokenizing private credit assets, such as invoices and SME loans.
- As of this report, Credit & Loans is the most common sector for DeFi tokenization products, with a total of 28 providers supporting real-world loans.
- Ethereum is the most common blockchain among RWA DeFi applications, with 31 out of 52 providers being run on the blockchain.
- A smaller portion of the RWA DeFi applications run on the Polygon, Solana, Avalanche, Celo, BNB Smart Chain, and Gnosis Chain blockchains.

DeFi RWA Protocols

The following table provides details on DeFi protocols that integrate real-world assets. These range from on-chain emerging markets lenders to protocols providing on-chain market participants with access to US Treasury Bills.

Protocol	Network	Active Loans	Total Lifetime Loans	Total Value Locked (TVL)	Market Capitalization of Protocol's Native Token	Month over Month Change in Market Capitalization (%) of Protocol's Native Token

Credix	Solana	\$33,185,576	\$41,668,152	\$31,000,000	N/A	N/A
Clearpool	Ethereum	\$20,436,412	\$476,464,219	\$11,551,297	\$42,278,156	-24.18%
TrueFi	Ethereum	\$19,002,202	\$1,740,000,000	\$18,470,000	\$51,517,992	-22.77%
HomeCoin	Ethereum	\$6,105,810	\$7,955,966	\$6,301,334	N/A	N/A
Clearpool	Polygon	\$984,779	\$80,674,770	\$708,309	\$42,278,156	-24.18%
Ondo Finance	Ethereum	N/A	N/A	\$185,860,000	N/A	N/A

Data period: 1 January 2024 - 31 January 2024

Data is sourced from project websites or other publicly available information.

Key Takeaways

- All protocols saw the market cap of their native tokens decline over the past month.
- Active Loans Amounts remained flat in protocols like TrueFi and Clearpool in the Ethereum network with 0% changes. In comparison, Clearpool in the Polygon network and Goldfinch recorded increases of 56.87% and 7.59% in Active Loans, respectively.
